Fax (+39) 011.944.24.04 - info@gloriacars.com - www.gloriacars.com

A great heritage

Enrico Glorioso founded Sparco in 1977 from scratch and created a company that, at the time of its release in 2002, was by far the world leader in the market and all thanks to the knowledge of the needs of materials and drivers' need. The success of that time was based on a simple idea: to have understood that comfort is essential for a driver! The early Sparco suits, more than 30 years ago, were the first to be approved without the heavy underwear of the time thanks to the development of materials and processes not common in those days. Today, the idea is the same: beat the competition with new materials and a lot of knowledge of materials to minimize weight and increase the comfort of the driver.

The new P1 racewear line is the result of an experience that few other people in the world can boast and of extensive research and development of new materials often created on purpose on his instructions and his passion for racing. P1 always offers the best value for money and can probably be considered the lightest and cheapest Fia approved suits and in general the most suitable products to everyone, from professional to amateur.

P1 competitive advantages

• Wide experience of all staff

Today the staff involved in the production can claim twenty years of experience in racewear manufacture

• P1 suits are entirely manufactured in Italy

This means a great attention to details and ensures style and fashionable appearance. Most of competitors produce in "low cost" Countries and everybody can feel the difference!

• Very competitive prices

We do not make miracles but we know how to maximize all resources to minimize costs. Furthermore our overheads are low despite most of our competitors

• Open to personalization

P1 range is very complete, but our ambition is that every driver could wear "his own" suit. Therefore, on some models we can suggest many customizations "ready to produce" at realistic prices. Any customers ideas is anyhow welcome.

TECHNICAL DETAILS

The most technical and fashionable P1 suit will be revealed on January 13th, 2011

PROTECH 0.8

FIA homologation #185, 4 layers
Most probably the lightest Fia approved suit in the world! A driver 175cms tall can wear a suit lighter than 900 grams (then the name Protech 0,8)
Ultramodern and original style, enriched with embroideries
Features: very special materials, tuned for P1, are needed to make, probably, the lightest suit in the market
Specially developed for professional drivers can also be modified, on request, to be worn by everybody.

TECHNICAL DETAILS 1 3 7
